

BOWANDE

LIVE STEAM UK LTD

GAUGE 1 LIVE STEAM DR 18201

Available now this stunning 1/32 scale live steam model of the German high speed pacific, 18201. For many years the only steam locomotive still certified for 100 mph mainline running, 18201 was a unique locomotive built in the Former East Germany. The model brilliantly captures the racy lines of this superb engine, with its huge 7ft 6 ½ driving wheels, the largest fitted to any pacific in the world. Gas fired with Bowande's well proven ceramic burner the model features 3-cylinder prototypical operation. This is a very small repeat production run of this highly popular locomotive which sold out very quickly when first released in 2016.

Now available in black and blue liveries in addition to the previously released green and red.
